What is CoE?

CoE is the **All4Labels' Center Of Excellence**, a physical hub dedicated to fostering and igniting innovation from both within and outside the company.

With a focus on collaboration, we actively work together with our clients, the best research centers and universities as well as external partners.

Thanks to this cross-sector approach, we **conceive, create, prototype** and **implement** the most innovative and sustainable solutions for the industry and the environment.

Designing through the future.

Our Perspective

We generate dialogue with stakeholders who are open to sharing ideas and have the drive to make a difference.

Our commitment is based on 4 main drivers: Ecosystem, Sustainability, Technology and Excellence. These form the pillars on which we continue to build value and exceptional results.

A unique ecosystem that is open to innovation

CoE is an important synergy-based ecosystem which welcomes a sharing of ideas and knowledge. A space where we work with clients, universities and cutting-edge startups to develop forward-looking products and technologies for the future.

We involved balance through solutions that characterize our future and challenge the status-quo.

We generate Excellence

We develop innovation to meet client requirements and address solutions to our industry. With our team, methods and products, we seek excellence in everything we do.

We actively encourage the sharing of knowledge and skills, a collaborative mindset that continuously fuels new thinking and ideas.

At CoE our target is to provoke a cultural shift and help shape the future.

Sustainability driven, technologically empowered

Every single action initiated at the CoE is driven by sustainability, because we can see decisive changes need to be made within the industry.

Sustainability is not just a word: it is a mission that goes beyond just the environment, as it also needs to address cultural, social and economic needs.

CoE is where the seeds of the future will be planted and nurtured, adding extra value to the products we create.

Technology meets talent

We are digital pioneers of the present and change-makers for the future. At CoE we develop innovative products through a unique approach to technology and research.

It is a place where a wide range of skills come together to accelerate the implementation of cutting-edge processes. By enhancing the power of technology we make life better.

We create value by **bringing together talented people** who want to make a difference.

The **goal** of CoE is to define activities and initiatives that focus on creating an impact in our stakeholders.

HACKATHON

An event which features a challenge, a day's work, numerous participants and even prizes. It is a chance for people to expand their network and meet innovators, developers, start-ups and companies as they build the future together.

INNOVATION DAYS

Days with an itinerary aimed at discovery and innovation, with a focus on future challenges and changes.
